DETAILED ACTION

Claim Objections

1. Claim 16 is objected to because of the following informalities: The phrase “that the detector...” is suggested to be changed to “such that the detector...”. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 16 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to define each variable in each equation.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
5. Claims 1-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-12 are directed towards a signal constellation which is

Art Unit: 2634

simply a data signal. Note this data signal merely consists of “1” and “0” to represent the coded signal. It does not fall under the category of a method, apparatus, product, or composition of matter. The signal falls into the category of Nonfunctional Descriptive Material. See for example MPEP § 2106 IV.B.1. (b) which states that

The policy that precludes the patenting of nonfunctional descriptive material would be easily frustrated if the same descriptive material could be patented when claimed as an article of manufacture. For example, music is commonly sold to consumers in the format of a compact disc. In such cases, the known compact disc acts as nothing more than a carrier for nonfunctional descriptive material. The purely nonfunctional descriptive material cannot alone provide the practical application for the manufacture.

The signal is functionally equivalent to the compact disc in that it is nothing more than a carrier for nonfunctional descriptive material (1's and 0's). The nonfunctional material, or the signal for that fact, cannot alone provide the practical application for the manufacture. Without a communications device, the signal is nonfunctional, it produces or manufactures nothing. Thus, a claim directed toward a signal is deemed non-statutory subject matter.

Allowable Subject Matter

6. Claims 13-15 and 17-24 allowable over prior art references because related references do not disclose communicating a constellation which includes points separated by a minimum distance based on a maximized minimum difference between conditional probability distributions.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Walker et al. (US 2003/0076889) discloses maximizing a minimum distance between constellation points.

Olafsson (U. S. Patent No. 6, 081, 555) and Goldstein (U. S. Patent No. 5, 822, 371) both disclose mapping constellation points.
